

# TECHNICAL DATA SHEET - NOMAWELL

Innovative entrance mat made of 100 % recycled polyamide on PVC backing, height 8 mm.

Nomawell is an innovative entrance mat for more efficient dirt absorption. Thanks to its unique double-fibre construction, it perfectly traps all dirt and moisture.

The Nomawell mat has a unique double fibre method. Hard scraping fibres remove coarse dirt from footwear, while soft absorbent fibres soak up finer particles and moisture. Both types of fibers are tightly sewn into the durable PVC backing.

The special, combined pattern is partly created by colour-matching the scraping fibre with the absorbing fibre.

The Nomawell mat easily absorbs dirt, hides it perfectly, is easy to vacuum and is ideal for entrances to offices, shops, hotels and other high traffic areas.

The NOMAWELL mat can be used for emergency routes and is certified according to the EN 13501-1. Classification: Cfl-s1
